This summary provides an evidence-based messaging technique to boost the uptake of life-saving vaccines, based on tests of 37 different SMS messages across 700,000+ patients to increase actual flu vaccination rates. This technique could be used to help encourage follow-through for COVID-19 vaccinations as vaccine supply increases.

| DO say the vaccine is “reserved” or “waiting for you” | This messaging technique was the top performer at increasing vaccination rates across all test sites (pharmacy and primary care). This strategy draws upon a well-studied behavioral science phenomenon: a reserved vaccine feels like it belongs to you, so it feels like a loss to give it up. |
| DON’T use an informal tone or interactive elements | Messages that had an informal tone or used interactive elements did not perform as well. |

**SAMPLE TEXT MESSAGES ILLUSTRATING THESE STRATEGIES**

**“Reserved for you” messaging**

March 1, 6:00 PM

Hi Alex! You have an appt w/ Dr. Smith on 3/4 @11:00am. A COVID vaccine is available for you. Protect yourself & your family’s health! Look out for a vaccine reminder message before your appt. You can opt out of a reminder by texting back OPT OUT.

March 4, 6:00 PM

This is a reminder that a COVID vaccine has been reserved for your appt with Dr. Smith.

**Interactive messaging**

March 1, 6:00 PM

Hi Alex! You can get a COVID vaccine at your local pharmacy. Please take a minute to think about the risk of catching COVID. Where do you think you’re ‘most’ likely to catch COVID? Please reply: 1 for ‘At work’ 2 for ‘At home’ 3 for ‘At the grocery store’ 4 for ‘At a bar or restaurant’ 5 for ‘Any other places you regularly visit’
ABOUT THE STUDIES

- Tested the effectiveness of **37 behaviorally-informed nudges delivered via SMS** to increase flu vaccination rates among two populations: approximately 700,000 Walmart pharmacy patients and approximately 50,000 primary care patients at Penn Medicine and Geisinger

- **Two of the largest studies of their kind** on how to change vaccination uptake at scale

- These nudges targeted flu vaccination, but **the insights likely can be used to encourage other types of vaccinations as well**

---

At Penn Medicine and Geisinger, **the average intervention increased vaccination rates by 5%**; the top performing interventions reminded patients a shot was “reserved” for them

- At Walmart, the **top performing intervention** reminded patients a shot was “waiting” for them

---

As more results become available, **BCFG will be releasing additional insights.** Visit bcfg.wharton.upenn.edu/vaccination/
